

一.提示如下报错

```
1 deployments.apps
```

```
990c5138f5d1: Layer already exists
5c384ea5f752: Layer already exists
293d5db30c9f: Layer already exists
03127cd0479b: Layer already exists
9c742cd6c7a5: Layer already exists
latest: digest: sha256:f850b8ddc1790024ba8198a4843f5a091f3773238e6d60a91234a334f298ca29 size: 2416
ERROR: Rancher2.x server response status code: 404, response body: {"baseType":"error","code":"NotFound","message":"deployments.apps \"szgcjs-server\" not found","status":404,"type":"error"}
Finished: FAILURE
```

解决方法:

1.

2.复制红框下面的一段

```
actions: {
  pause: ".../v3/project/c-vvnhbf:p-5fw9d/workloads/deployment:szgcjs-server:szgcjs-server?action=pause",
  redeploy: ".../v3/project/c-vvnhbf:p-5fw9d/workloads/deployment:szgcjs-server:szgcjs-server?action=redeploy",
  resume: ".../v3/project/c-vvnhbf:p-5fw9d/workloads/deployment:szgcjs-server:szgcjs-server?action=resume",
  rollback: ".../v3/project/c-vvnhbf:p-5fw9d/workloads/deployment:szgcjs-server:szgcjs-server?action=rollback"
},
annotations: {
  cattle.io/timestamp: "2022-11-21T08:36:56Z"
},
baseType: "workload",
containers: [
  {
    allowPrivilegeEscalation: false,
```

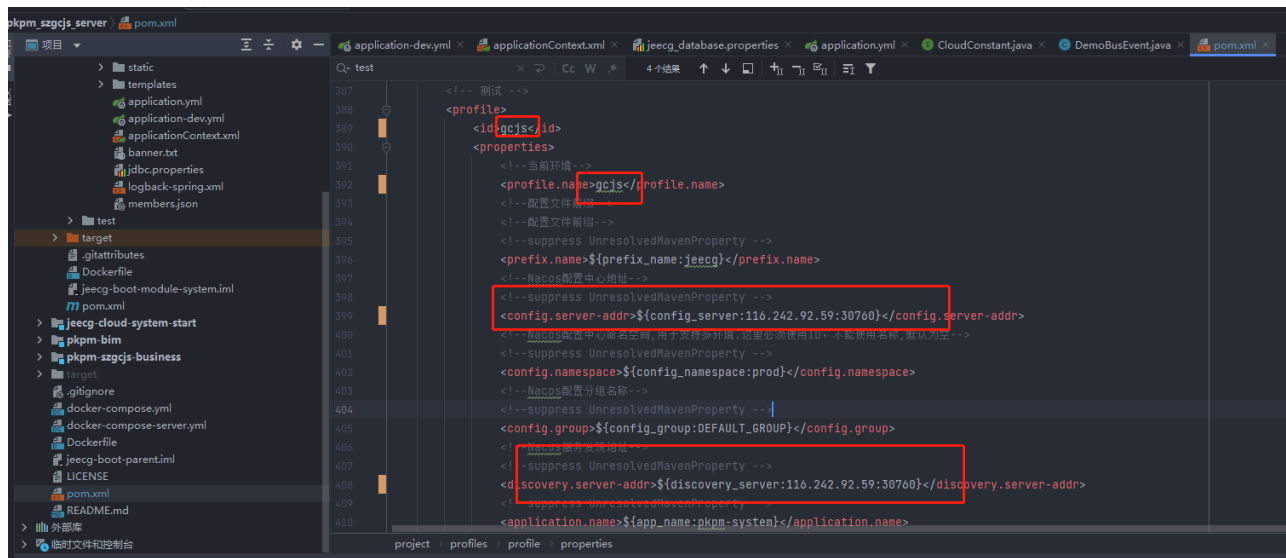

3.复制到如下的地方

Workload API Path ?

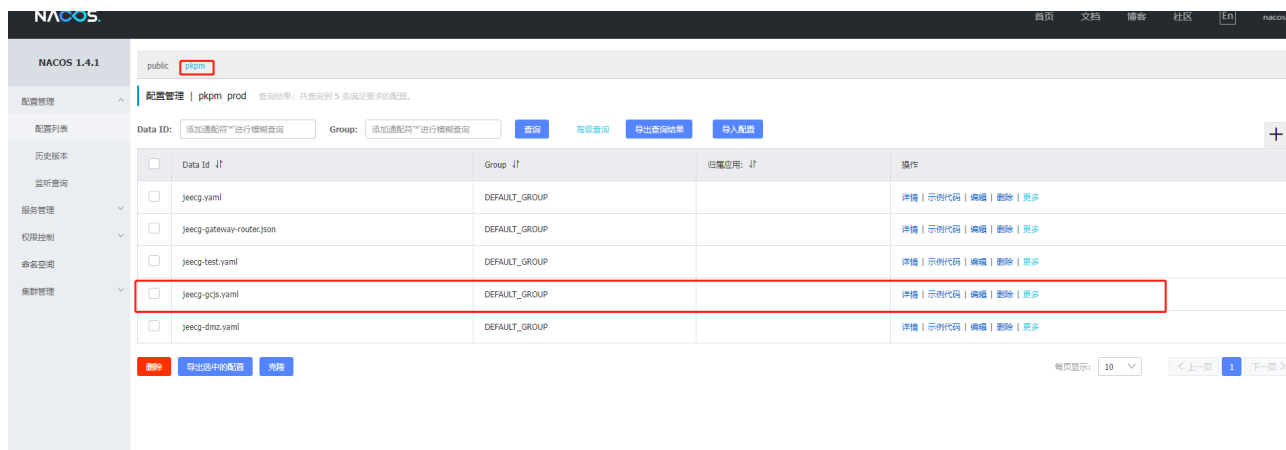

/project/c-vvnhbf:p-5fw9d/workloads/deployment:szgcjs-server:szgcjs-server

二: Nacos配置以及服务部署的配置

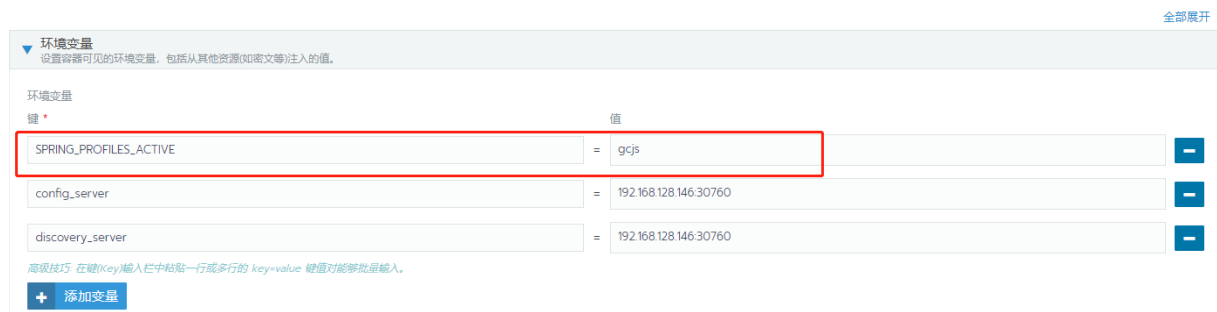

1.修改下面的这个配置

## 2.下面配置具体的数据库连接

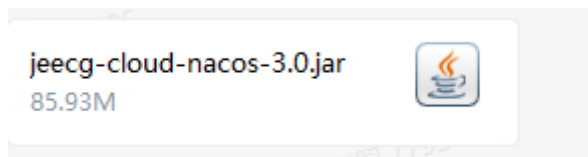

## 3.网关的配置修改

其他的坑：

如果网关运行提示url找不到要替换下面两个jar包

▼  jars/jeecg-boot-starter-cloud-3.0.jar
